

Dealing with Audio and Video Sync

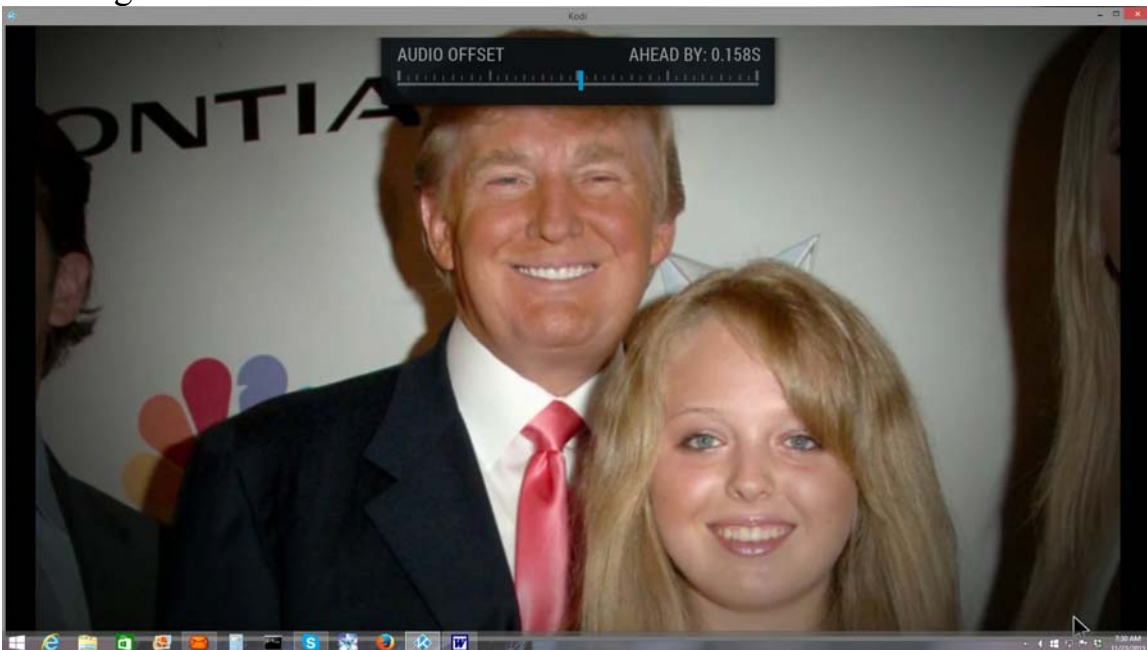

With streaming video sometimes the Audio can be out of sync with the video. You know the lips don't seem to be moving along with the sound.

If the sync is out enough that it is bothersome to you it can be easily adjusted with the following method.

1. While your video is playing click the "OK" button to display the dropdown menu
2. Use the "Left Arrow" to scroll to the "Speaker Icon"
3. Click OK on the speaker icon
4. Use the down arrow 3 lines and click the Audio Offset

5. Use the right arrow to adjust the Audio usually between 0.150 and 0.175 will be good

6. Click the return button until dropdown menu is closed and continue to enjoy your show.
